

Invest in Your Future Health™

The Limitless Potential of Stem Cells

The National Institutes of Health recently discovered powerful stem cells in the pulp of healthy teeth. Medical researchers around the world are working today to develop effective new treatments from stem cells for a wide arrangement of diseases and injuries such as:

- Diabetes
- Cancer
- Alzheimer's
- Parkinson's Disease
- Arthritis
- Bone Regeneration
- Joint Replacement
- Heart Failure
- Brain Trauma
- Crohn's Disease
- Leukemia
- Infertility
- Muscular Dystrophy
- Osteoporosis
- Periodontal Disease

Protect your family's future health with the promise of stem cells.

Ask your Dentist about the promise of stem cell science in the event of disease or injury. With StemSave™, your dentist can preserve the lifesaving benefits of stem cells until they are needed most.
